Foundations of Sociology

This course will provide an overview of what it means to study people and society from a variety of sociological perspectives. The first part of the course traces the development of these perspectives along with the related methods sociologists use to study society. From here, the sociological concerns with Culture, Society, everyday social Interaction, and a variety of Social Institutions will provide the background for a review of the more substantive areas of sociological investigation which will be taken up in the Sociology 102 Introductory sections offered next term.

Upon completion of the course, you should have a thorough understanding of how Sociology refers to and depends upon specifically sociological perspectives which will be shown to be distinct from, while still interested in, other disciplines that are also concerned with the human condition (Psychology, Philosophy, Anthropology, Economics, etc.). You should also appreciate to what extent sociological practice is based on these perspectives and the range of issues and concerns it studies. Finally, you will understand – and hopefully be influenced by – the nature of the sociological commitment to encouraging a well-informed, critically aware, and humanely concerned citizenry.
